

## Maths - Week Five, Lesson 3: Counting to 50 in tens

This is a practical counting lesson - you will need to find lots of items around the house to count and group!

### Activity One: Accurate Counting

Find fifty items - they can be one thing, or lots of different things!

You could use... pennies, counters, socks, shoes, teddies, little toys, cutlery, playing cards, magnetic letters, crockery, pieces of pasta... anything you have!

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50

### Activity Two: Sort them in to piles of 10

When you have made your piles, count them in ones. Then count them in tens. Keep practising counting in 10s!

### Activity Three: Creating number sentences

Move your piles together and apart to make different sums using + = to help you - maybe write a + and = on a piece of paper to help. How many sums to fifty (using groups of 10) can you make?

+

= 50

20

+

30

= 50

**Challenge:** Now that you are amazing at grouping and counting in tens, challenge yourself! Can you group them in fives and count in fives? How about groups of two and count in twos?
